

COINXCHANGE

Online Coin Management System is a system which maintains information about the coins, and it records about their gradings (G, VG, F, VF, XF, AU and UNC) which helps us determining its value, their composition, it also tells us about the origin country and if they are currently in circulation or not and also tells us when these were stopped circulating, it also converts value of foreign coins to INR, it will include a Sign-up/Register page for users which will record their information and with that what his/her collection has and display about their rarity(on a index from 1 to 100, 1 being the rarest) which helps them to showcase their collection, and they can also search for other coins from other users and can contact them if want to buy/sell/exchange coins.

If a user has a coin and wants to add to his/her collection, then there will be a option where he/she will tell about the grading of their coin and it will be added to their collection displaying the rarity of that coin
